

SOFTWARE ENGINEERING

ABSTRACT:: ONLINE STUDENT FEE MANAGEMENT.

ABSTRACT

In today's world of technology , no one in the this world like to perform huge bundle of calculations on simple / scientific calculator or manually when computer is exist in the home ,school ,offices and hospitals . Everyone wants to complete his /her work by computer automatically and displaying the result for further manipulations within twinkle of an eye. So this project is about providing convenience regarding fee management system.

User is no longer required to check his register in search of records, as now it can be searched over the software by choosing some simple options. On the whole it liberates the user from keeping lengthy manual record, and it abates the work load of an organization.

This project "FEE MANAGEMENT SYSTEM" will be able to implement in future after making some changes and modifications as we make our project at a very low level. The modifications that can be done in our project are to add the snaps of the student of which the record is entered. This will result in total identification of the given student. Similarly, various modifications can be done to enhance the usability of the given project as suitable for user's requirement.

Student fees management/collection software is one of the most automated fees calculation software that we can only provide. Apart from being automated it is flexible enough to accommodate the varying nature of fees payments that all education centre come across. Fees collection is done on the basis of course for the students. Our student fees management software automatically calculate pending fees, previous paid details, deduction and concession if any applicable to the selected student.
